4 Steps To Creating a Free Website

Say NO TO HTML CODE, Make websites the MODERN WAY, Find out about the basic Barebone system towards WebSite Creation

This site will show you how to create a website in **PLAIN ENGLISH**.

Now there are obviously many reasons why you want to create a website, whether it is to show of with friends or to generate **INCOMING CASH**. But the reason is up to you and this site will explore those thoughts of yours.

In this site I also provide actual links to software and information you can go through if you want to make the best of your site.

So without any further delay, the steps you need to take is:

- > Think what you want the site to achieve in other words what the site will be about.
- > Get software to create the site.
- > Get a Domain name (A website address).
- > Get a hosting service, The guts of the website on the web
- > Advertise - optional

Motivating yourself is another aspect you need to consider as creating a site can be time consuming. Therefore you need to think of a topic that interests you and will interest you for the long run to get people's attention to your site.

Facts:

This whole site has been created based on these **(4 STEPS TO CREATING A FREE WEBSITE)** plan. This should be the proof you need to convince and **MOTIVATE** you that this site is not only legitimate but also the way to go forward if you are dying to get your say in the world.

Besides having only your voice being heard you can **GENERATE CASH** as a second income as this site does for me.

Buy Now!

I tired to explain all the things you really need to create a site, but besides only creating a website, one big factor that follows is Marketing your site on the Web.

2StartAWebsite.com talks briefly about that, but you should get the idea once you have established yourself on the web

Now that's how easy it is. Click the below to get started
